

Testimony in support of House Bill 6635 AAC Solar Energy

Dear Energy and Technology Committee

I am hoping you will fully support solar power in Connecticut. I want the solar power rebate system to be able to raise more money. I hope you will require utility companies to buy increasing amounts of solar energy over time. The old state buildings should be solar powered institutions, for we all know they are not green structures. I want large freestanding solar systems to be able to be installed on underutilized vacant spaces. And we need the new green jobs solar installation will create. Because Connecticut is not conducive to wind power, we must make every effort to maximize our solar capacity.

Our North Haven Clean Energy Task Force has reached out to citizens to have a portion of their electric bill come from clean energy. The State of Connecticut should show their support of this effort by passing HB3365.
